

**Fraser Specialty Products (FSP)** has been one of North America's foremost suppliers of quality wood siding and cedar shingles for more than 15 years. In areas where natural wood may not be the most effective choice, FSP complements its product line by custom staining fiber cement shingles.

Fiber cement shingles effectively simulate the look of wood while providing the durability of cement. Fiber cement shingles, which can be sourced through one of our manufacturing associates, are machine coated at our facility using Cabot's proven Factory Finish® process and are available in two finishes—C<sup>3</sup> WoodTones or C<sup>3</sup> Solid Colors.

C<sup>3</sup> WoodTones offers the most realistic wood-like look for cement shingles on the market today, and its long-lasting, water-based formulation protects the substrate from early moisture and U.V. damage. C<sup>3</sup> Solid Colors provides a rich, opaque color with a 100% acrylic resin, which protects the cement shingle against premature fading and is guaranteed to last up to 40 years.

**Built to last!**

FSP uses Cabot's® C<sup>3</sup> cement coating for fiber cement shingles. Whether you choose the C<sup>3</sup> WoodTones or C<sup>3</sup> Solid Colors finish, your shingles will not crack, peel, blister, discolor or yellow with age.

**Coated on all six sides**

Fiber cement shingles are coated in our plant using the "Flow-Thru" process. All six sides of the shingle are coated to ensure the maximum protection from nature's elements. The result is an exceptionally fade-resistant and washable finish.

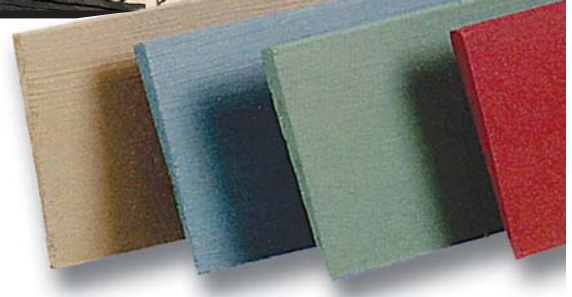

**Enduring quality—guaranteed!**

FSP is proud to offer Cabot's 25-year extendible warranty on fiber cement shingles that we factory finish with two coats of C<sup>3</sup> Solid Colors. Shingles stained with two coats of Cabot's C<sup>3</sup> WoodTones carry a 12-year extendible warranty. Your Cabot warranty can be extended by re-coating your shingles with Cabot's *The Finish with Teflon Surface Protector* before the end of the original warranty period.

**No more delays—shingles are ready to install**

Eliminate expensive and irritating painting delays! No more scheduling or weather-related issues, no overspray, dripping, splattering or clean-up problems. Your project will look finished immediately.
